Juan Pablo Rodriguez- 20251020072

# PROJECT DEFINITION

## FOCUS

The project focuses on designing and implementing an object-oriented system that allows users to plan, book, and manage social events efficiently.

## WHAT WE WANT?

We want an intuitive interface for clients and administrators to coordinate reservations, services, and payments.

## HOW WE WILL DO IT?

emphasizing the use of UML diagrams, CRC cards, and object-oriented principles to guide implementation.

# REQUIREMENTS

## Non functional

- Usability and responsiveness
- Security and data protection
- Reliability and performance
- Availability 24/7

## Functional

- User registration and login
- Event reservation and management
- Payment system integration
- Admin panel for service control

# USER STORIES

1

As a client, I want to see and compare different pre-defined party packages ,so that I can easily choose the one that best fits my needs and vision without having to plan every detail myself.

2

As a customer, I want to have multiple, clear ways to contact customer support , so that I can get help in the way that is most convenient for me

3

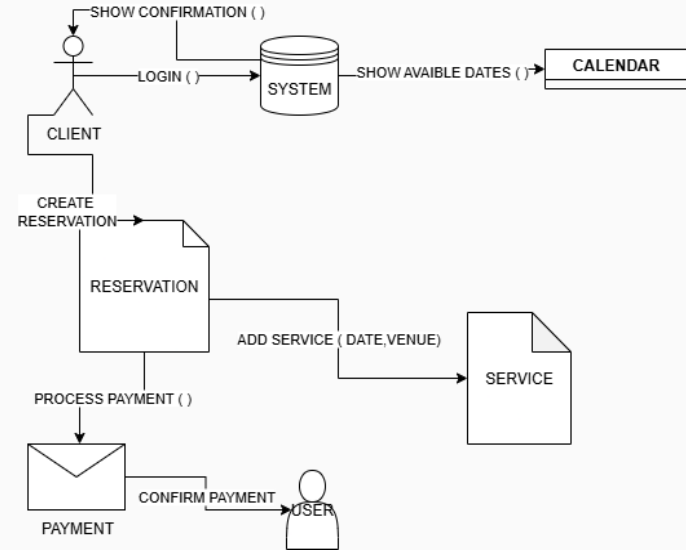

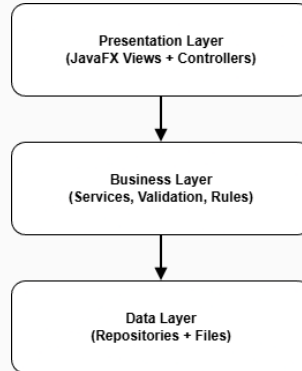

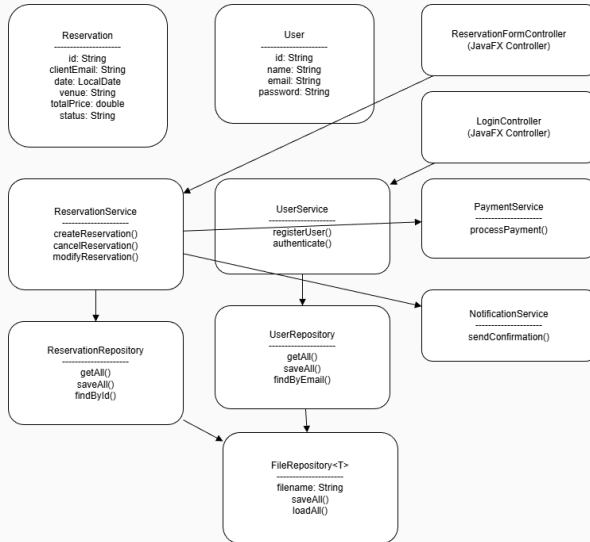

As a customer, I want to create a personal account using my email and a password, so that I can save my preferences, see my booking history.

# CRC CARDS

|                                                                                                                                                                        |                                                                                                                                                    |                                                                                                                                        |                                                                                                                                                                           |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Venue                                                                                                                                                                  | User                                                                                                                                               | Calendar                                                                                                                               | Reservation                                                                                                                                                               |

# DIAGRAMS

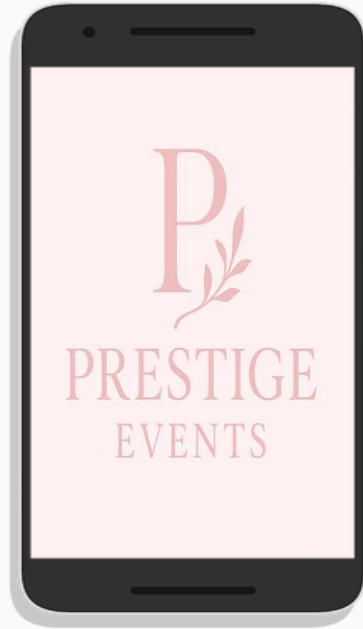

# REFLEXION

We realized that CRC cards are extremely important when developing any project. Without the CRC cards, we would not have been able to create the UML diagrams, and without the diagrams, programming would have been much more complicated since we wouldn't have had a clear foundation of what we wanted to build. Also, when looking at other pages of events, we see our failures in the project, so we are improving to make the page more catchy and more attractive to the user using our knowns.
